## Review Rating Distribution

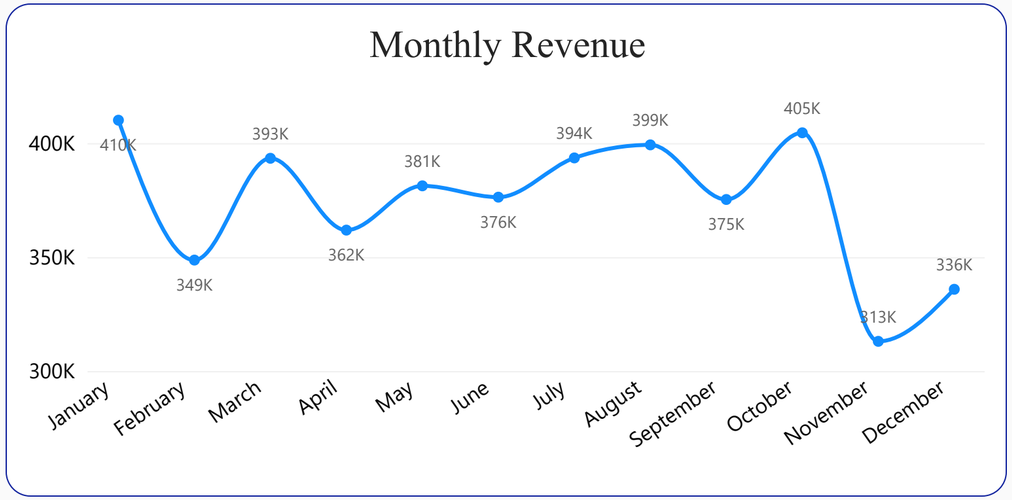

## Revenue By Category

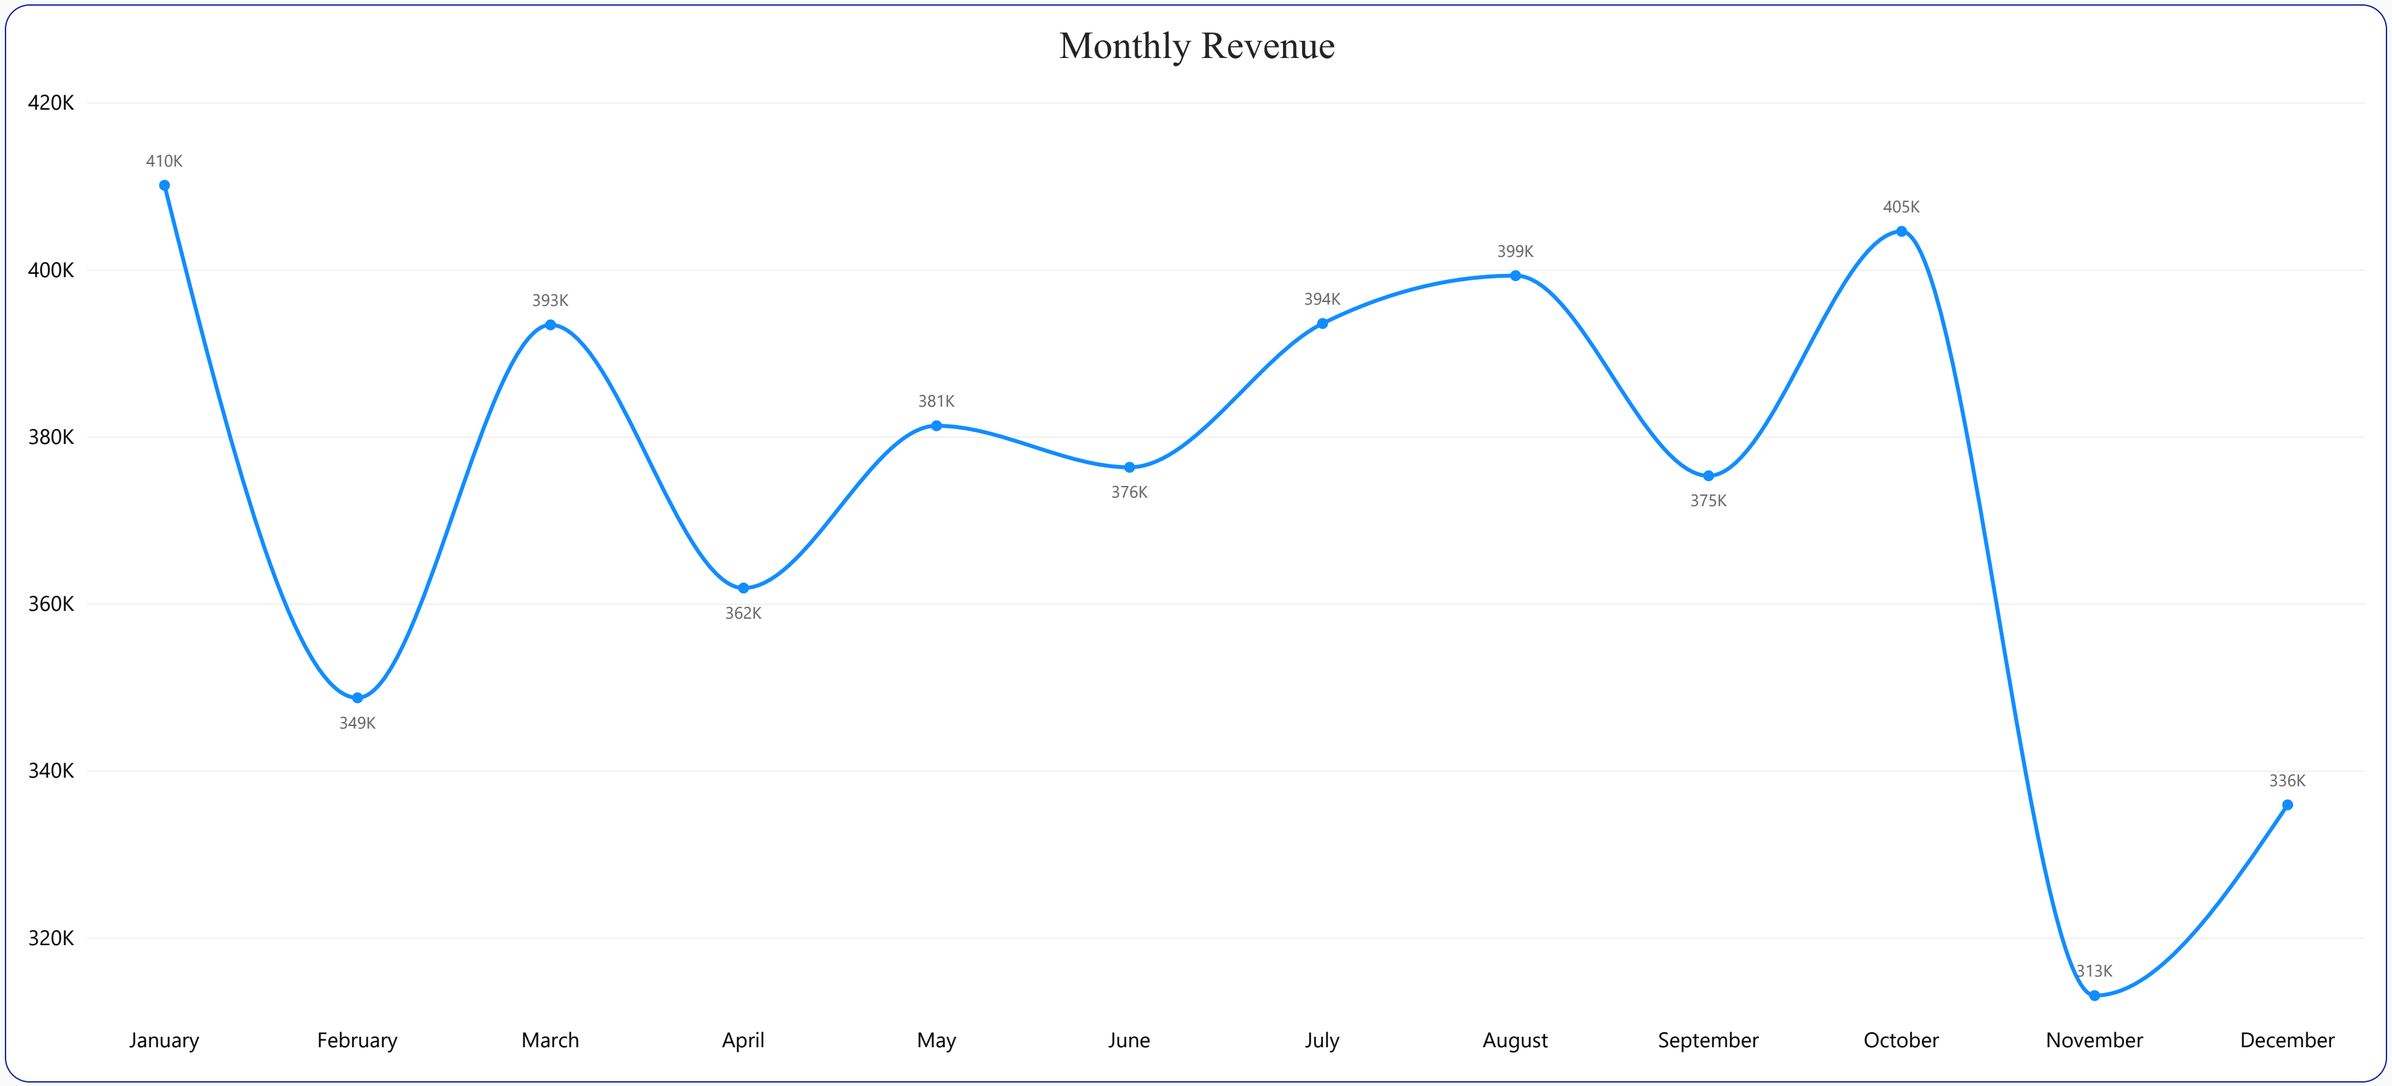

## Profit Margin and Total Orders

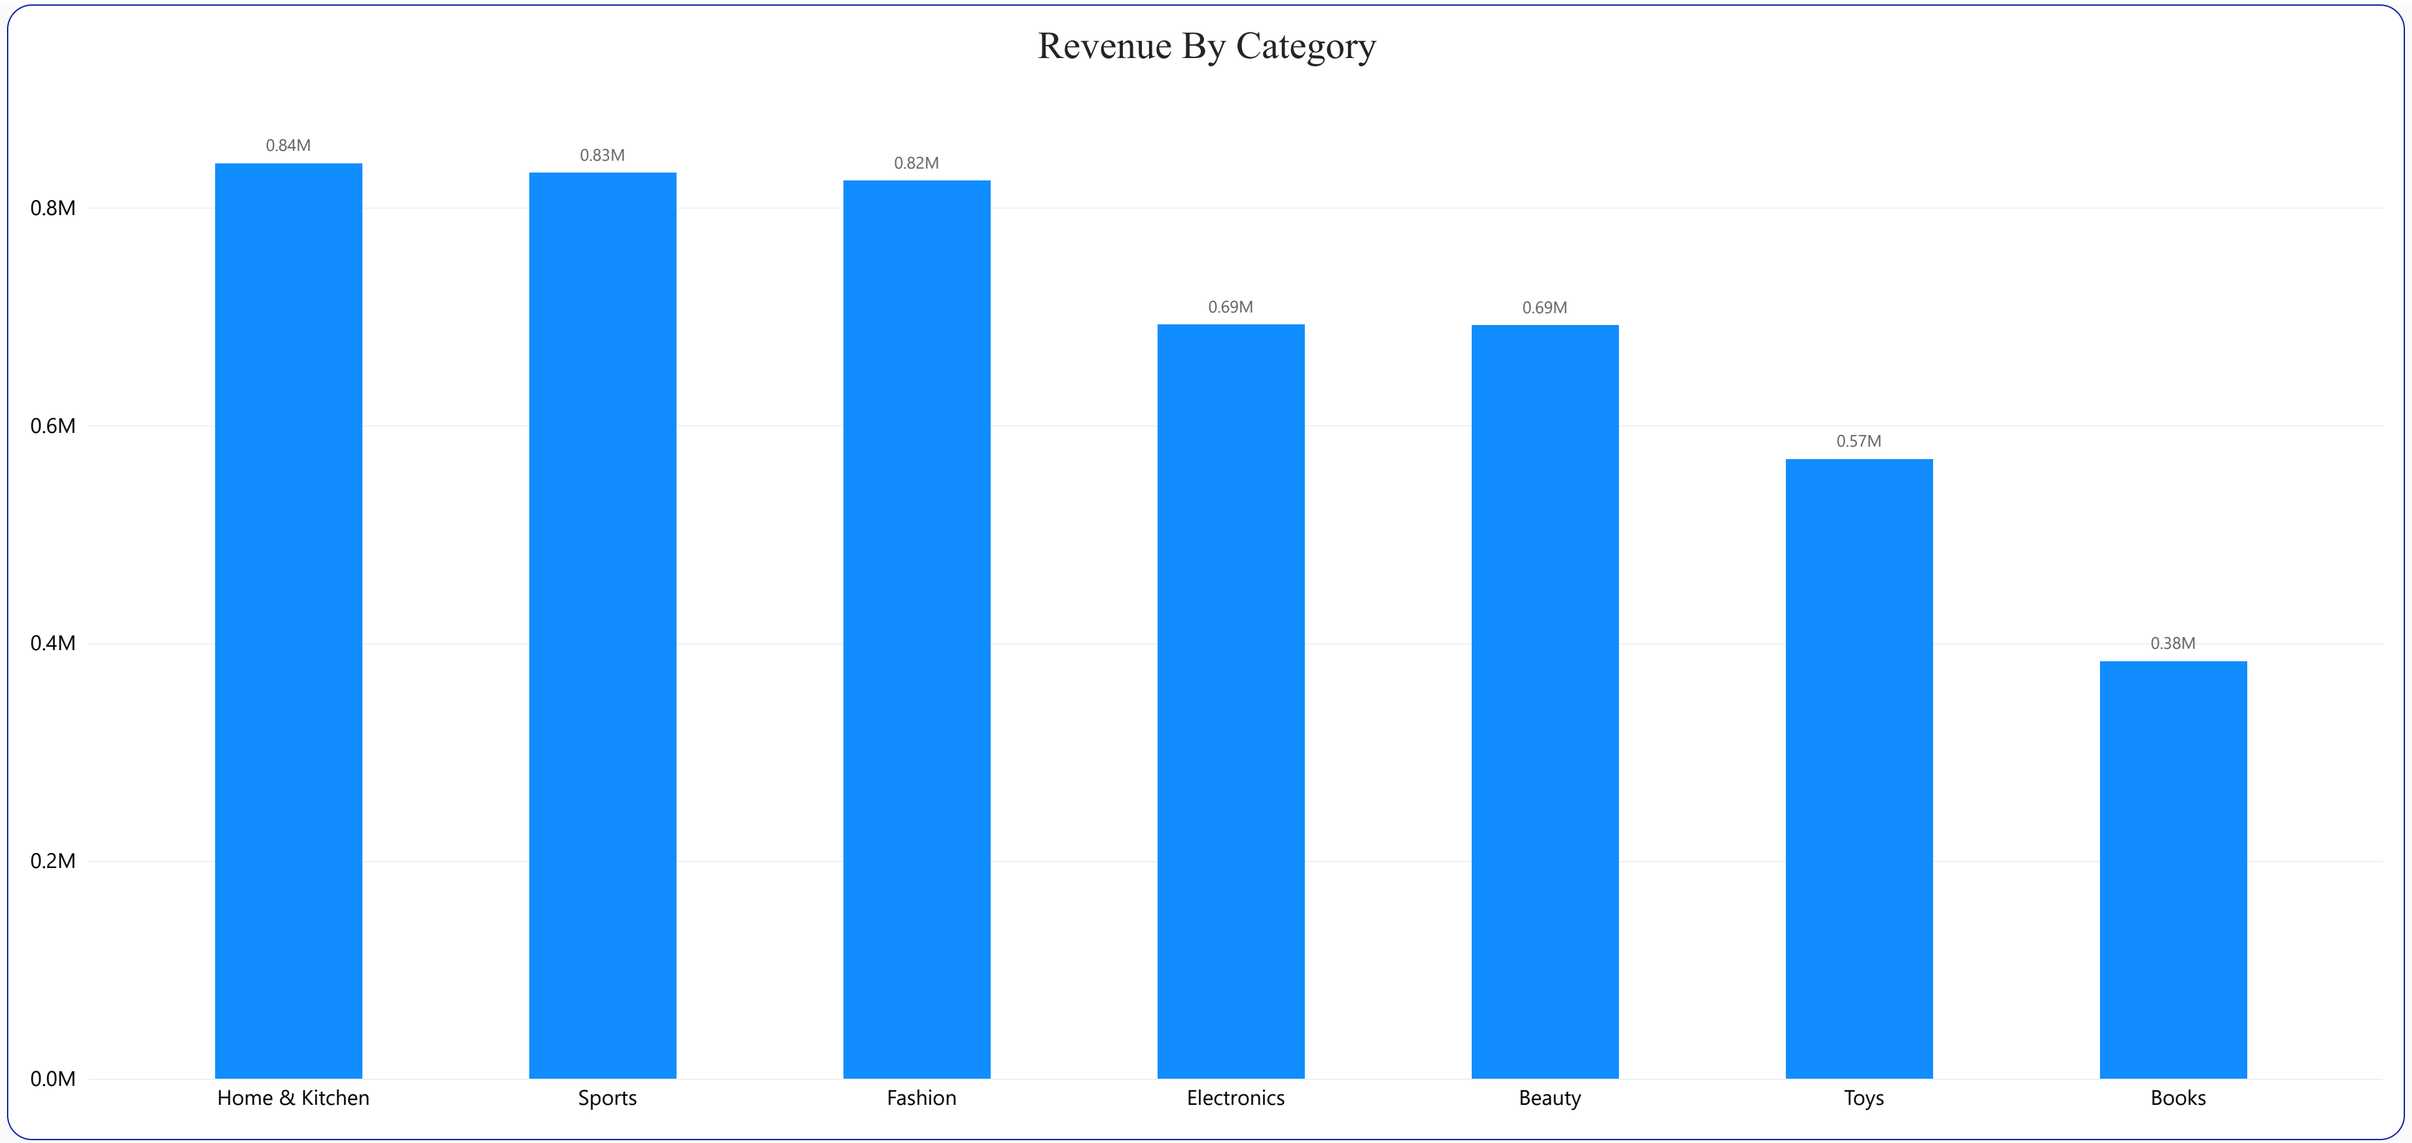

## Monthly Revenue

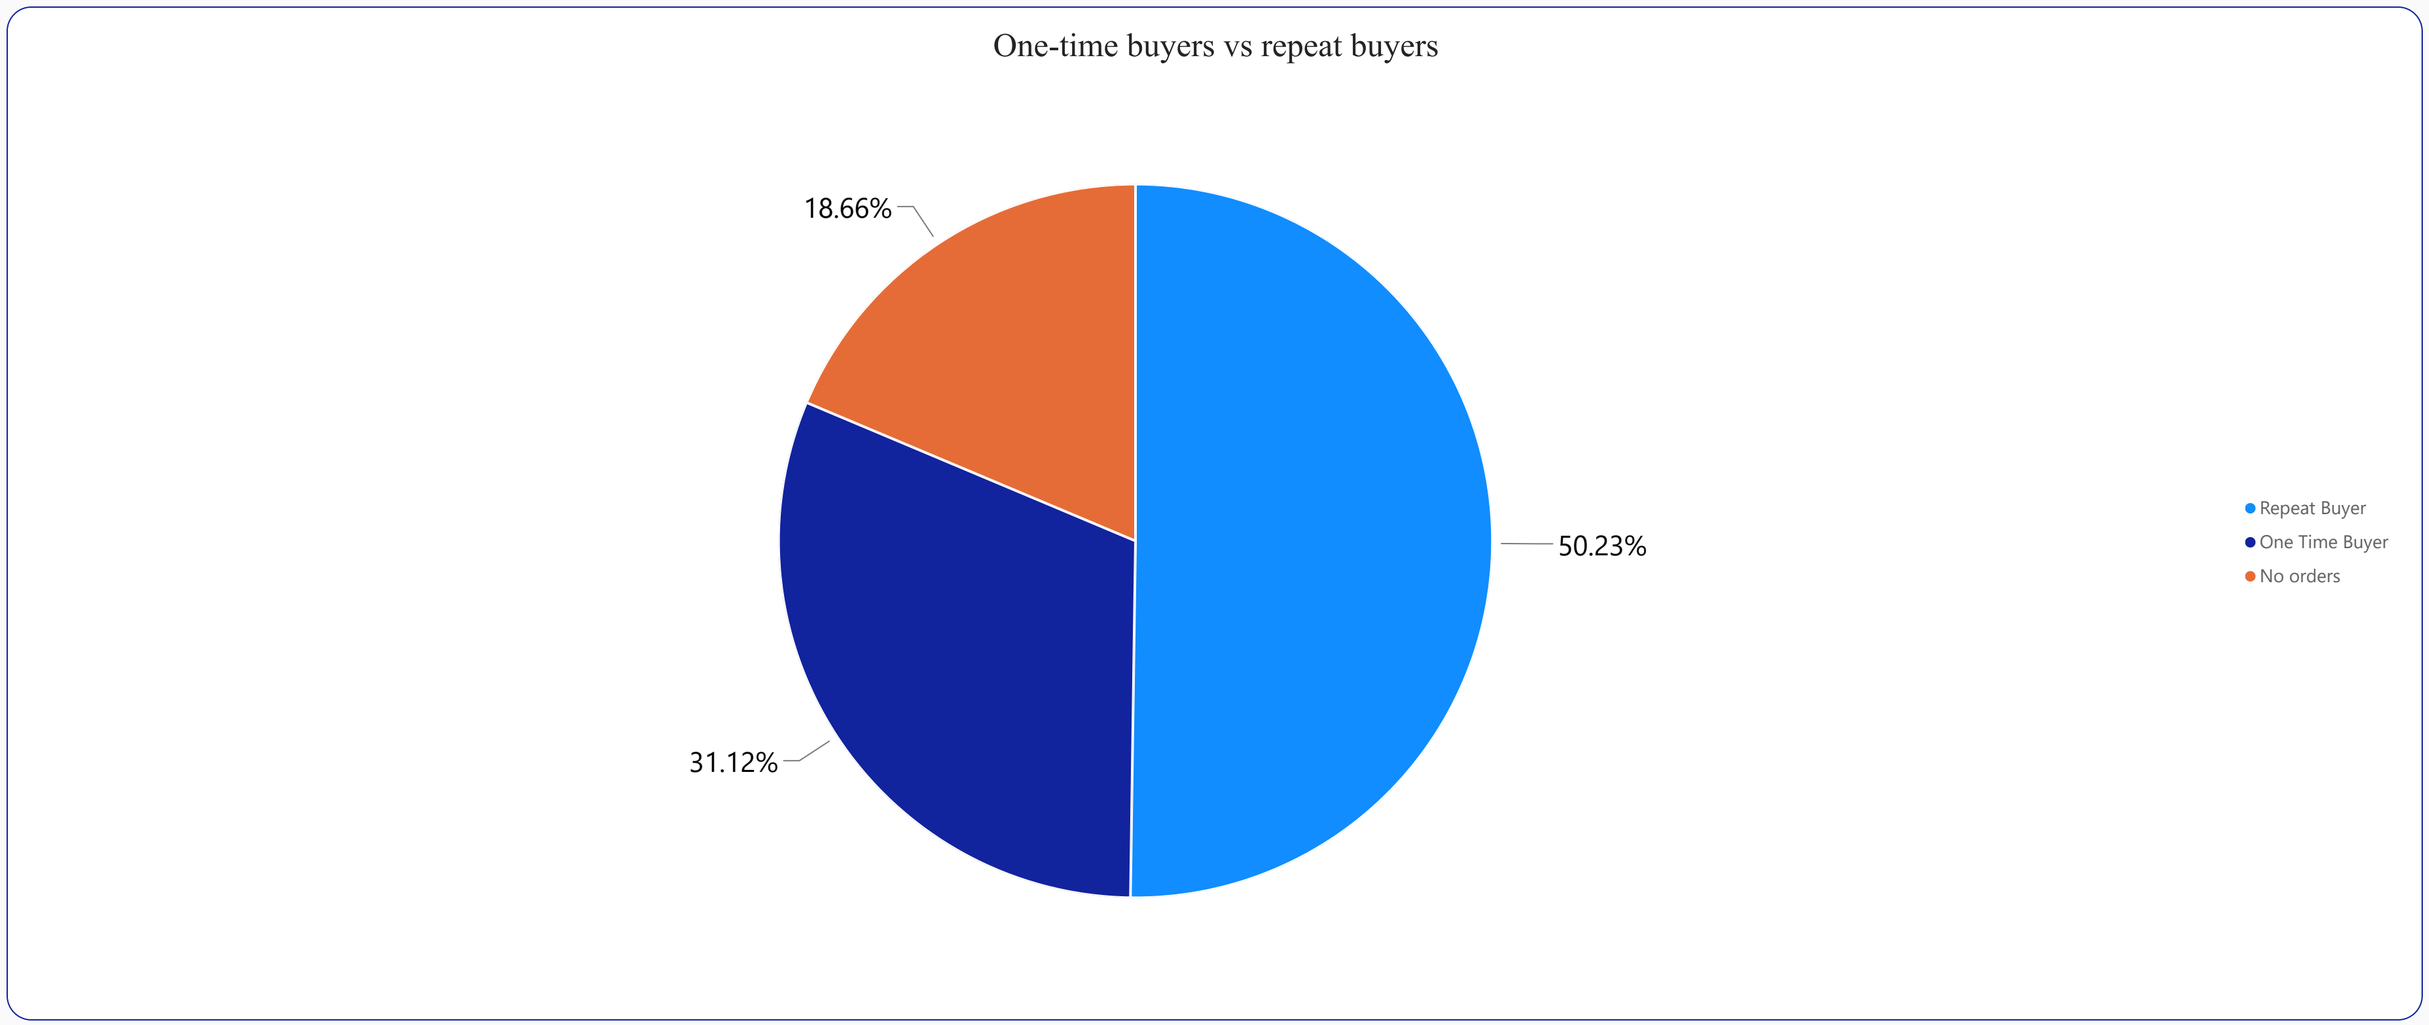

How does revenue change over time?

Revenue fluctuates over the reporting period, with the strongest month occuring in January. This may indicate seasonal demand or changes in purchasing activity.

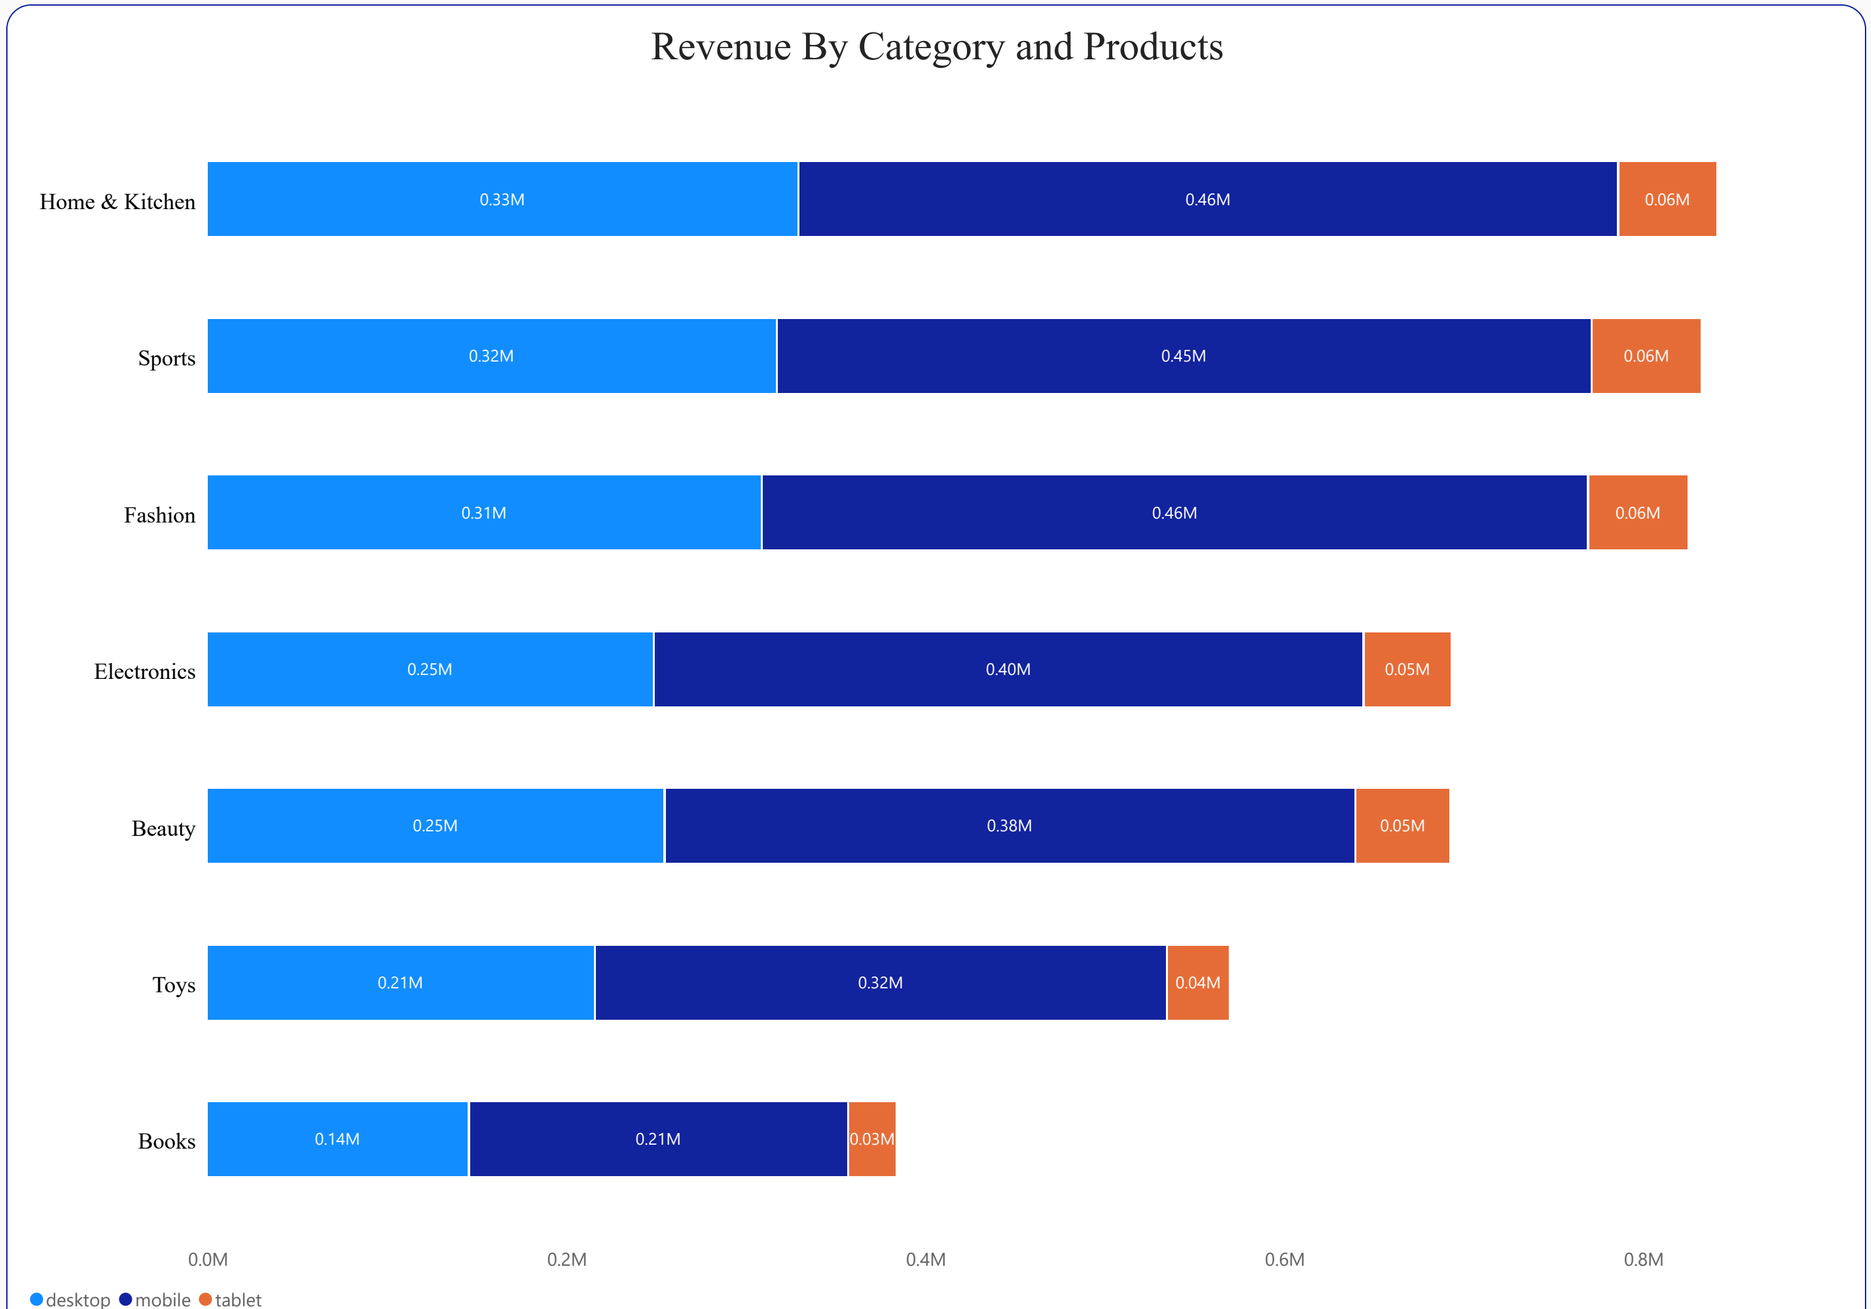

How does revenue change over time?

Category HOME & KITCHEN 0.84M contributes the largest share of revenue, while BOOKS 0.38M generates the least. This highlights where sales are concentrated across the product portfolio.

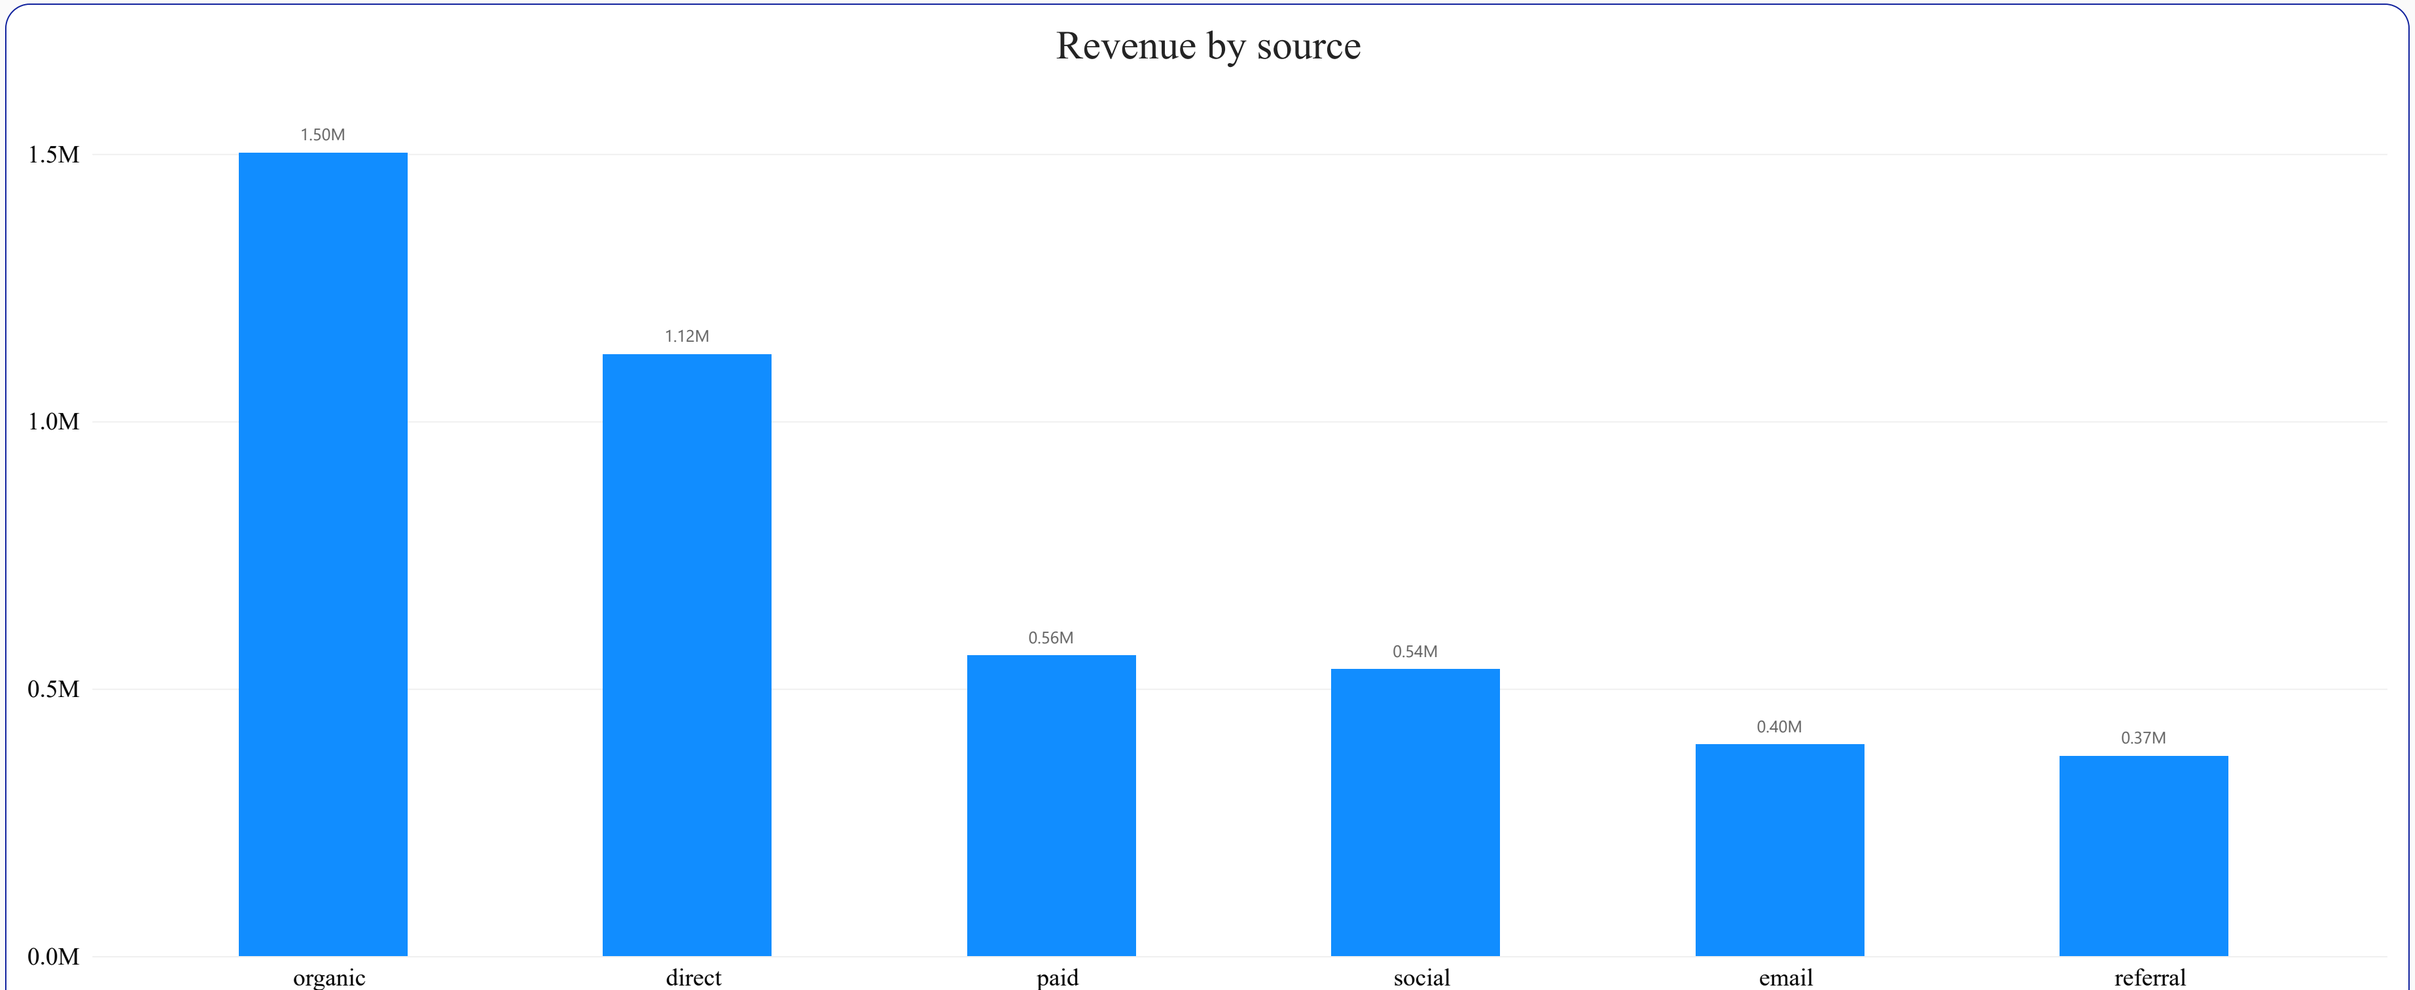

Total_Customers
20K

Which proportion of customers return to buy again?
The SQL results show 10,045 repeat buyers and 6,223 one-time buyers among customers who purchased. Repeat buyers therefore represent approximately 50.23% of purchasing customers, suggesting that repeat purchasing is an important part of customer activity.

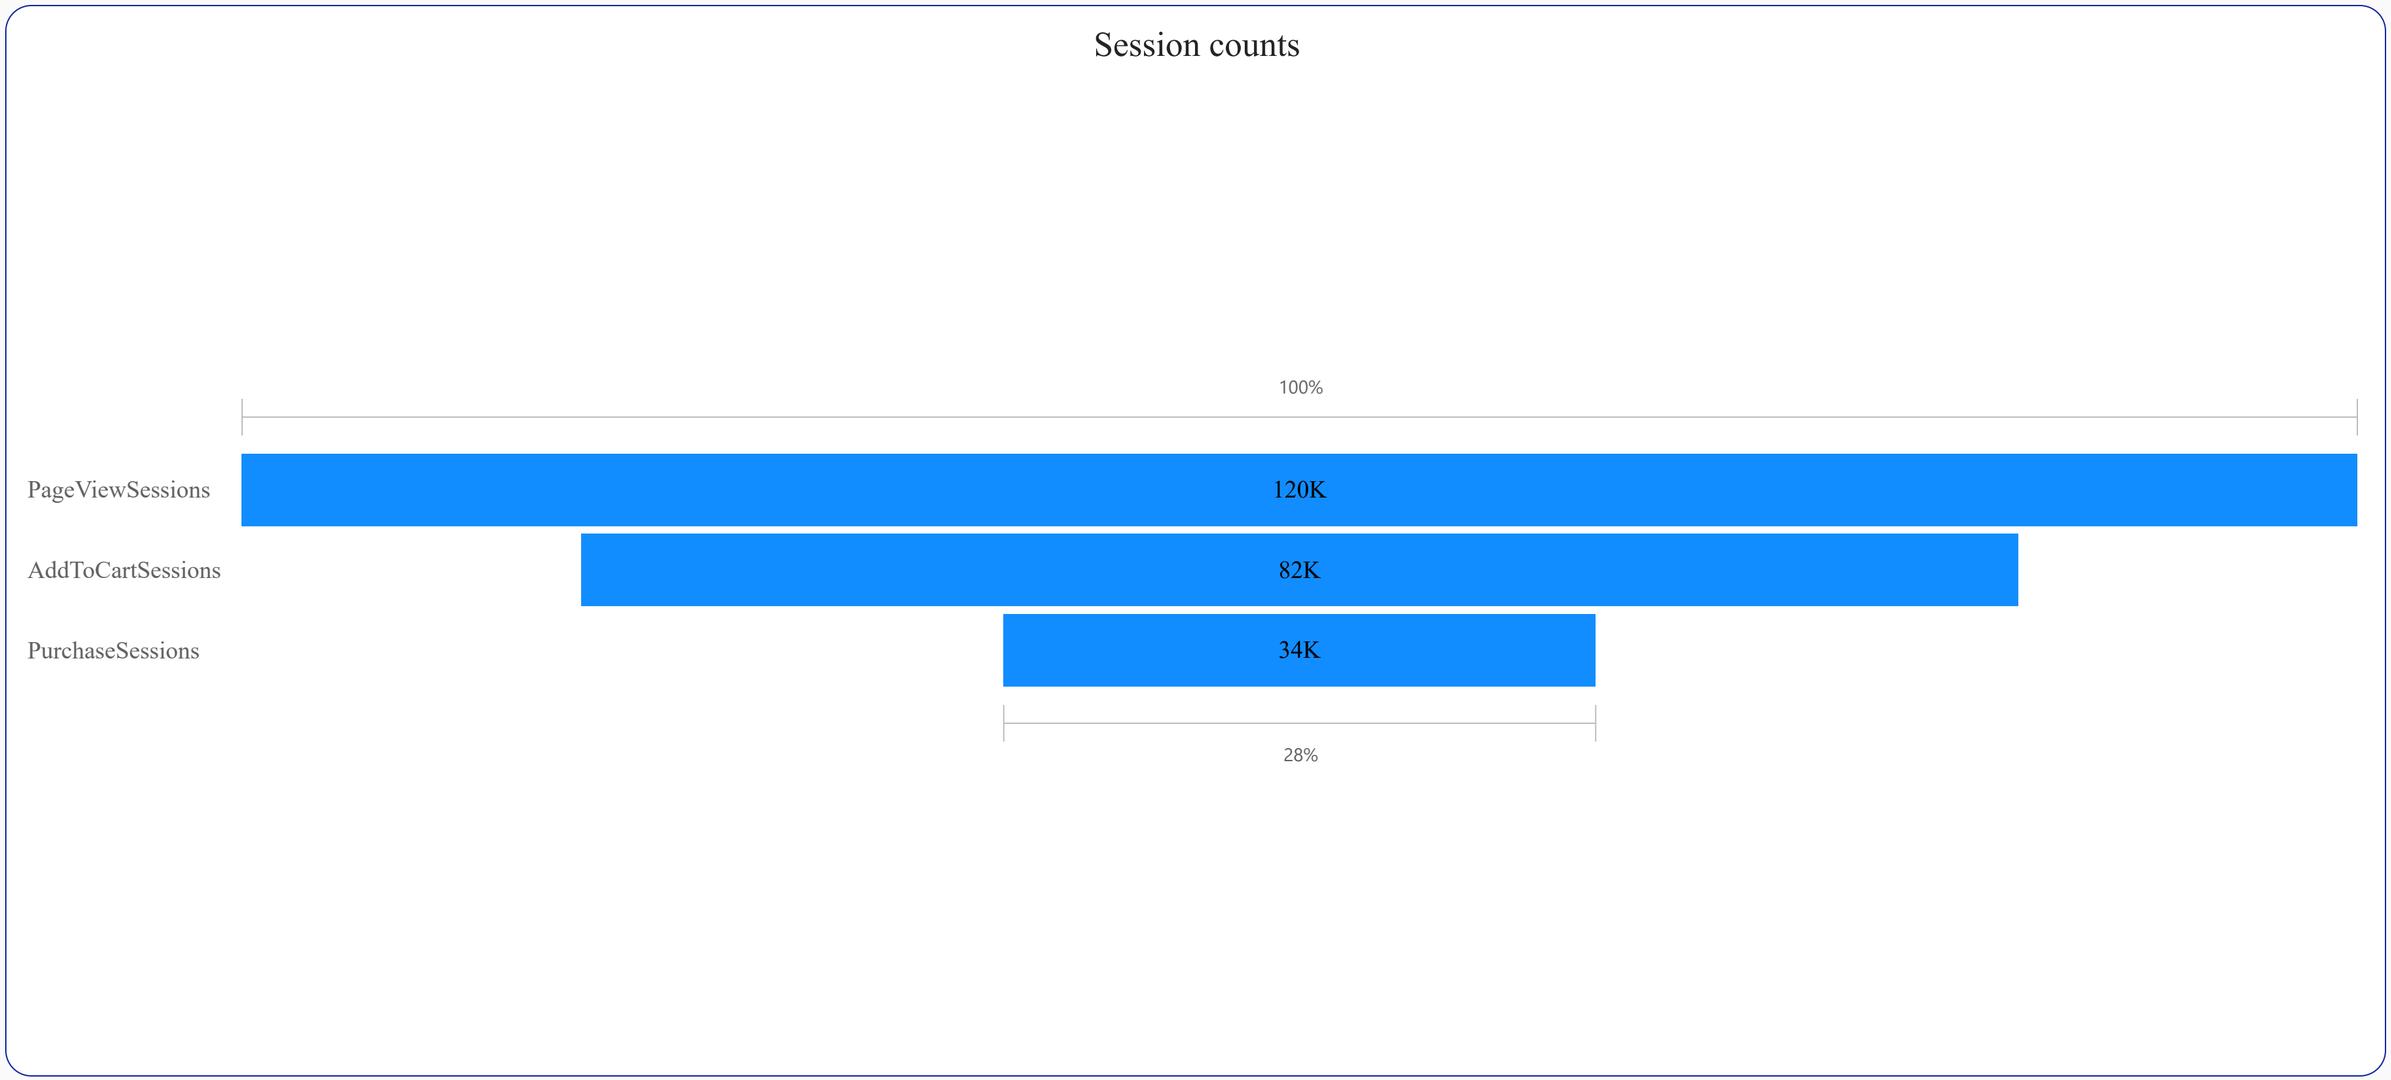

Which products contribute most to profitability?

Product HOME & KITCHEN generates the highest profit.
Comparing profit across products helps identify which items contribute most to profitability, rather than simply generating high sales.

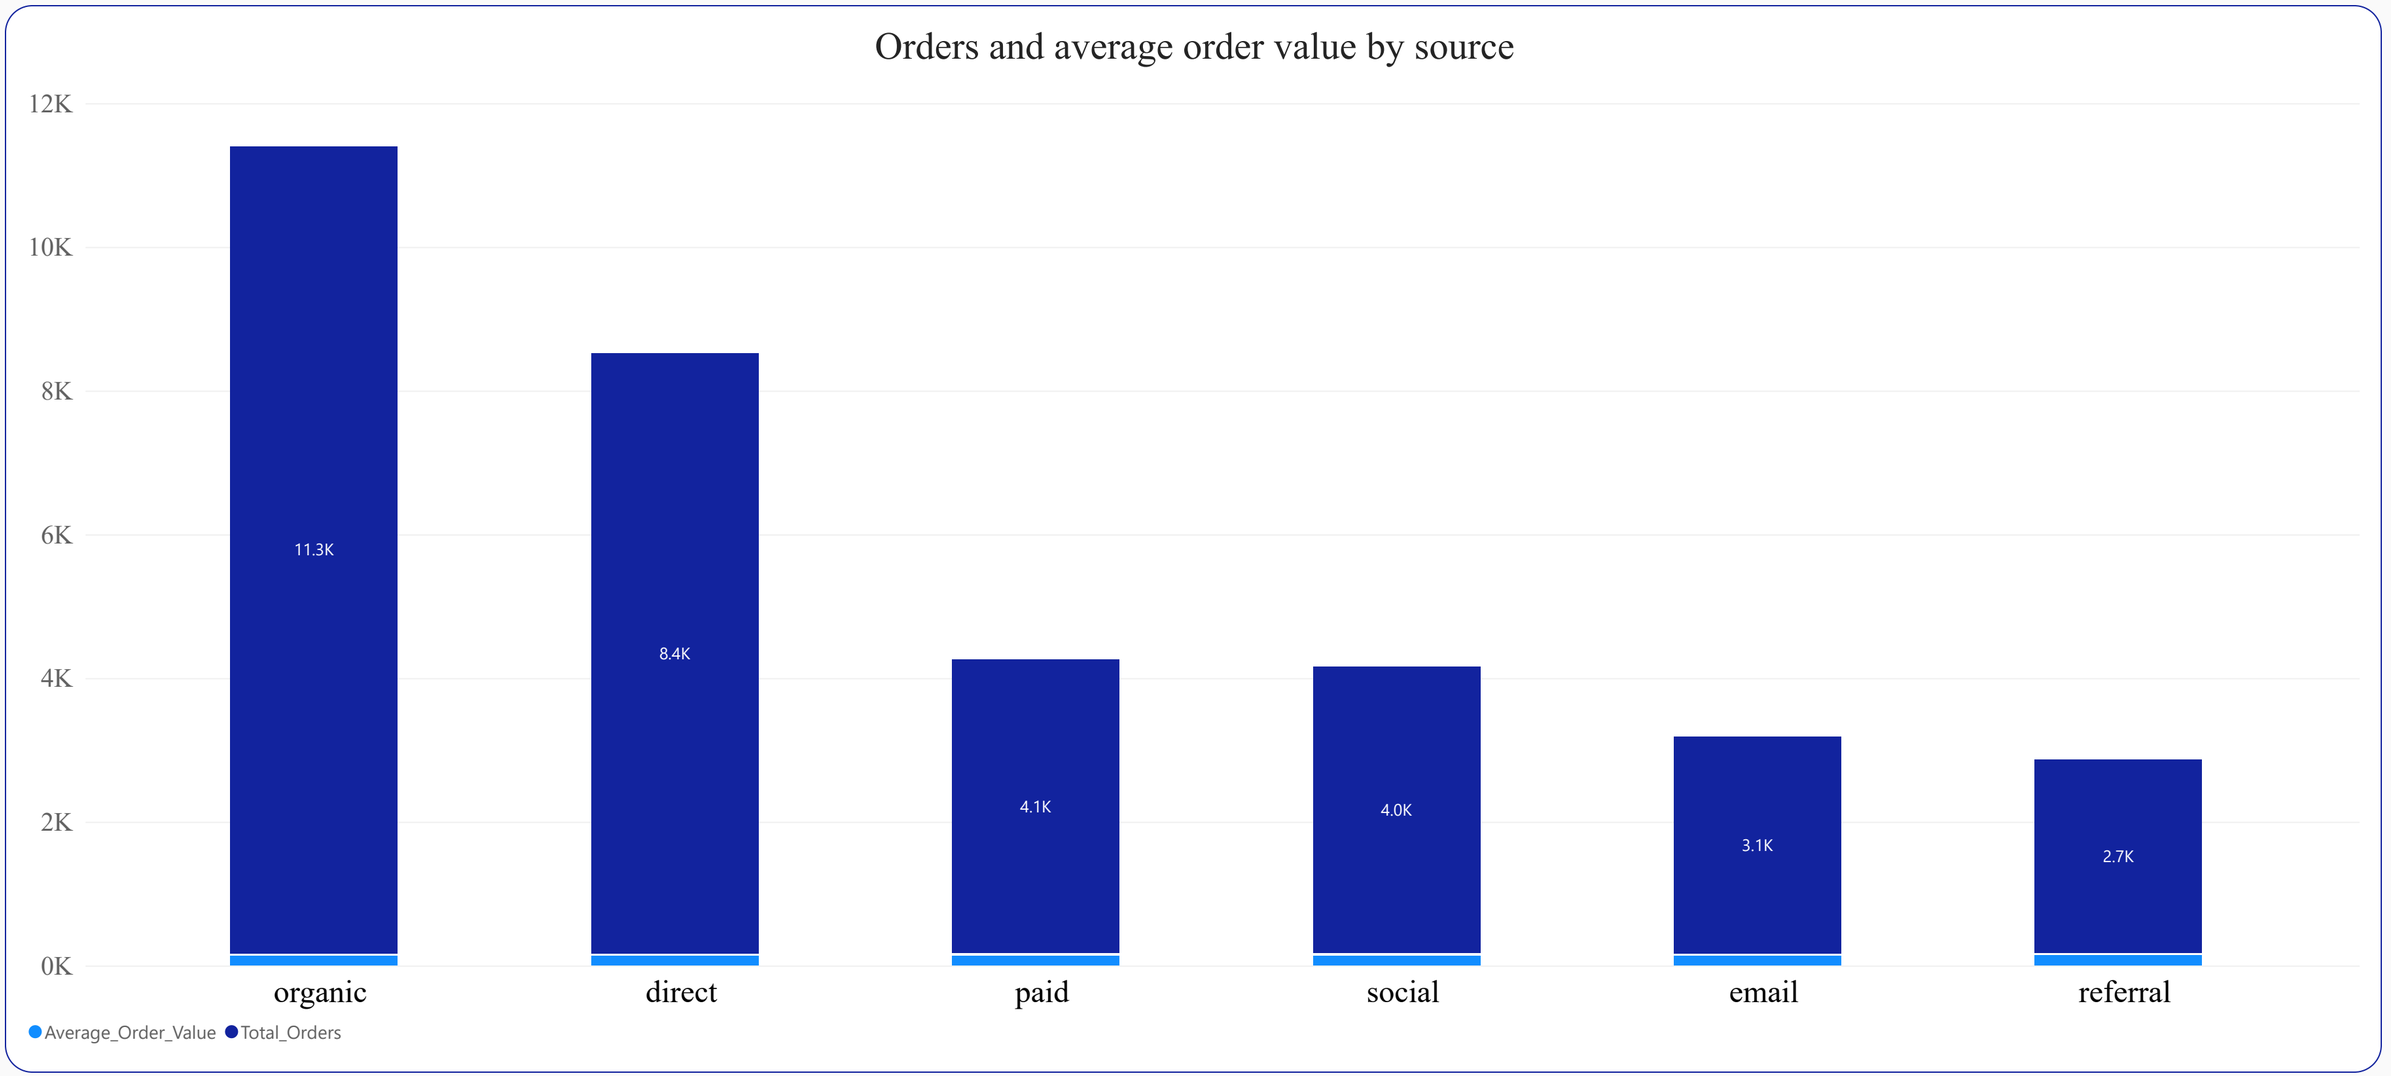

Which marketing sources generate the most revenue?

Source ORGANIC generates the highest revenue, while source REFERRAL contributes the least. This shows which acquisition channels currently generate the most sales, although revenue alone does not establish which channel is most cost-effective.

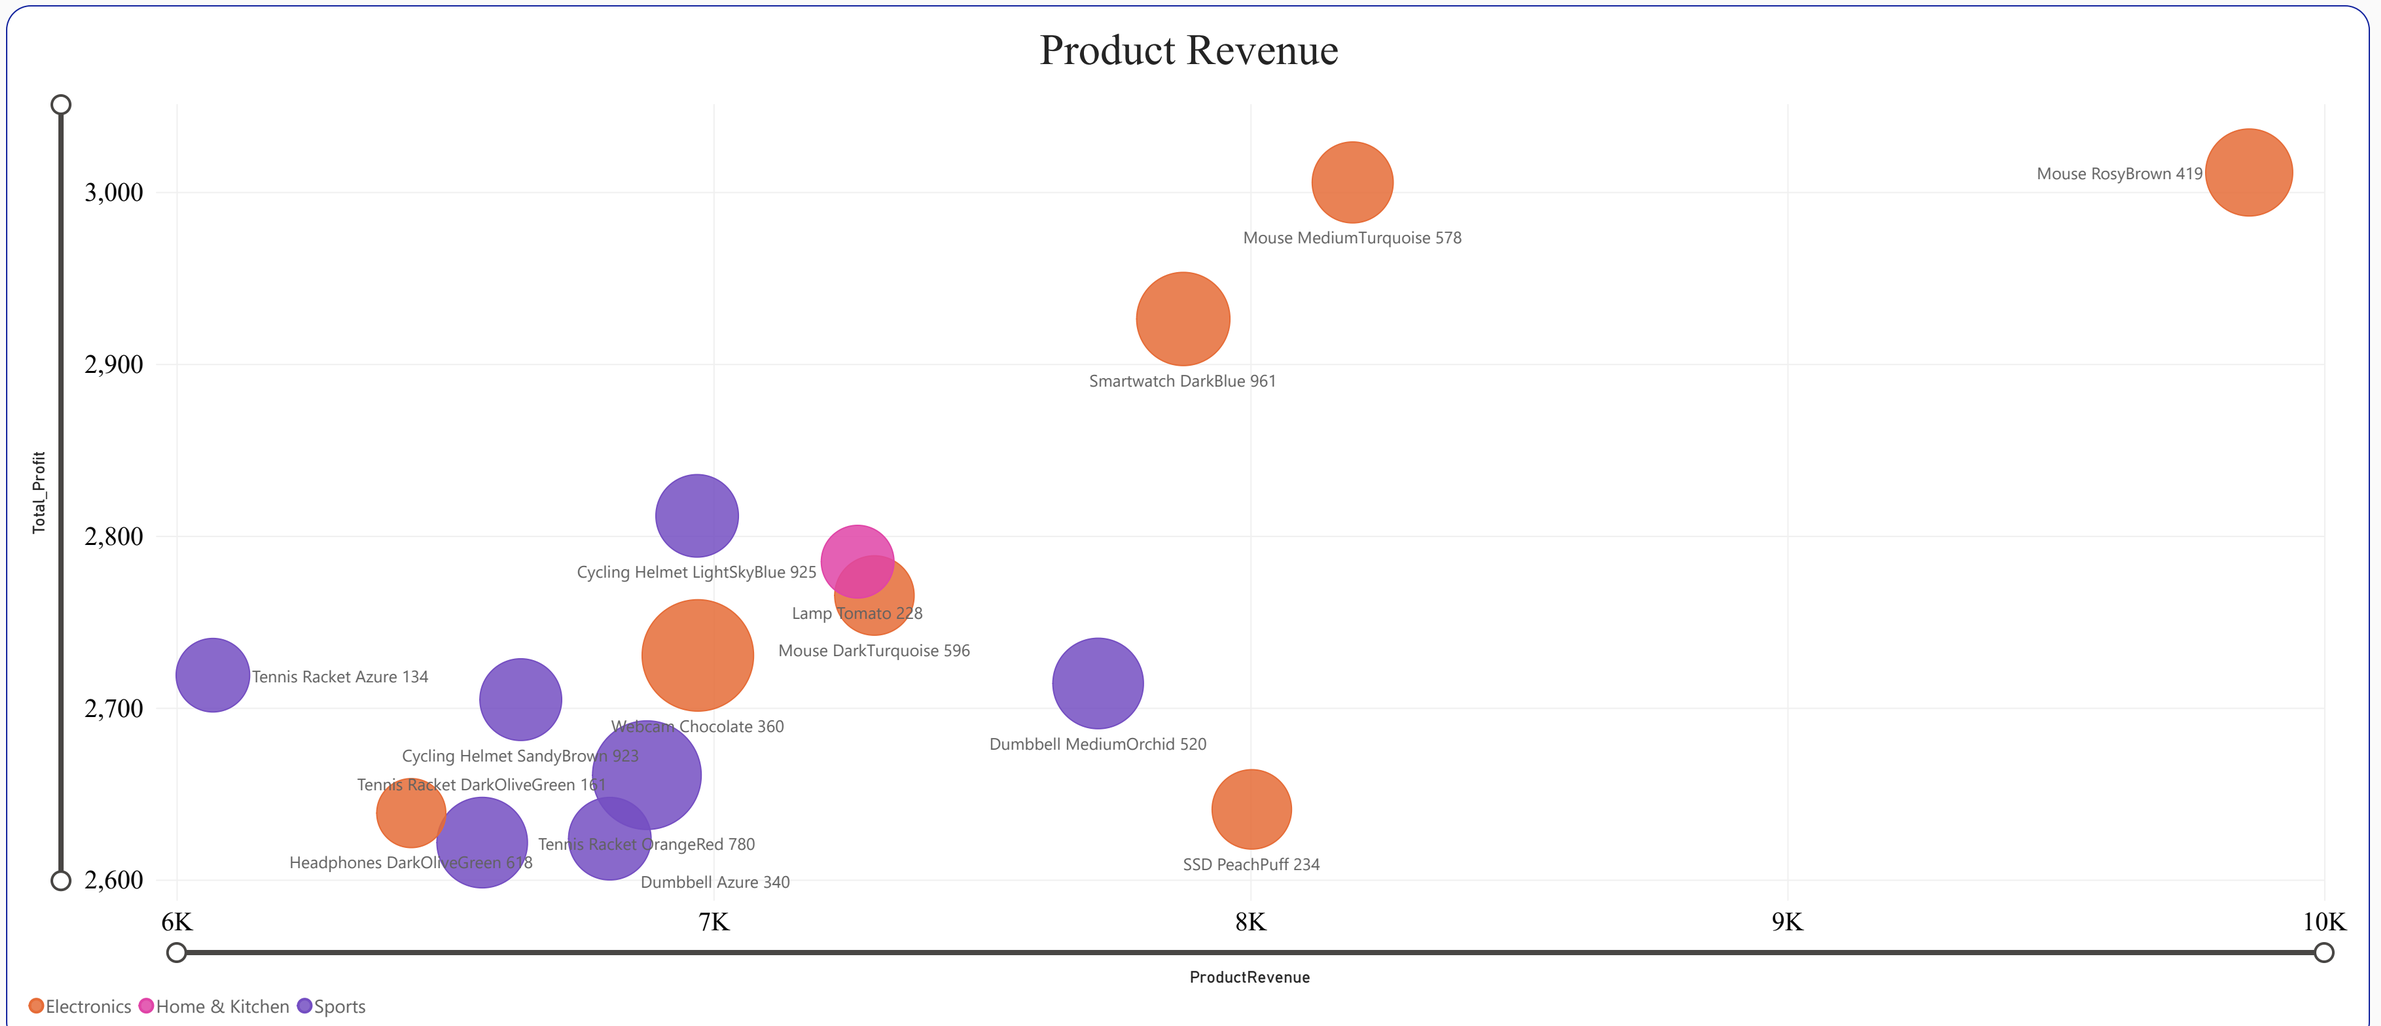

How many sessions progress from page view to add to cart to purchase?

Of the 120K sessions that viewed a page, 82K added a product to their cart and 34K reached purchase. The largest drop-off occurs between ADD TO CART 32% and PURCHASE 75%, identifying where the buying journey may need further investigation.

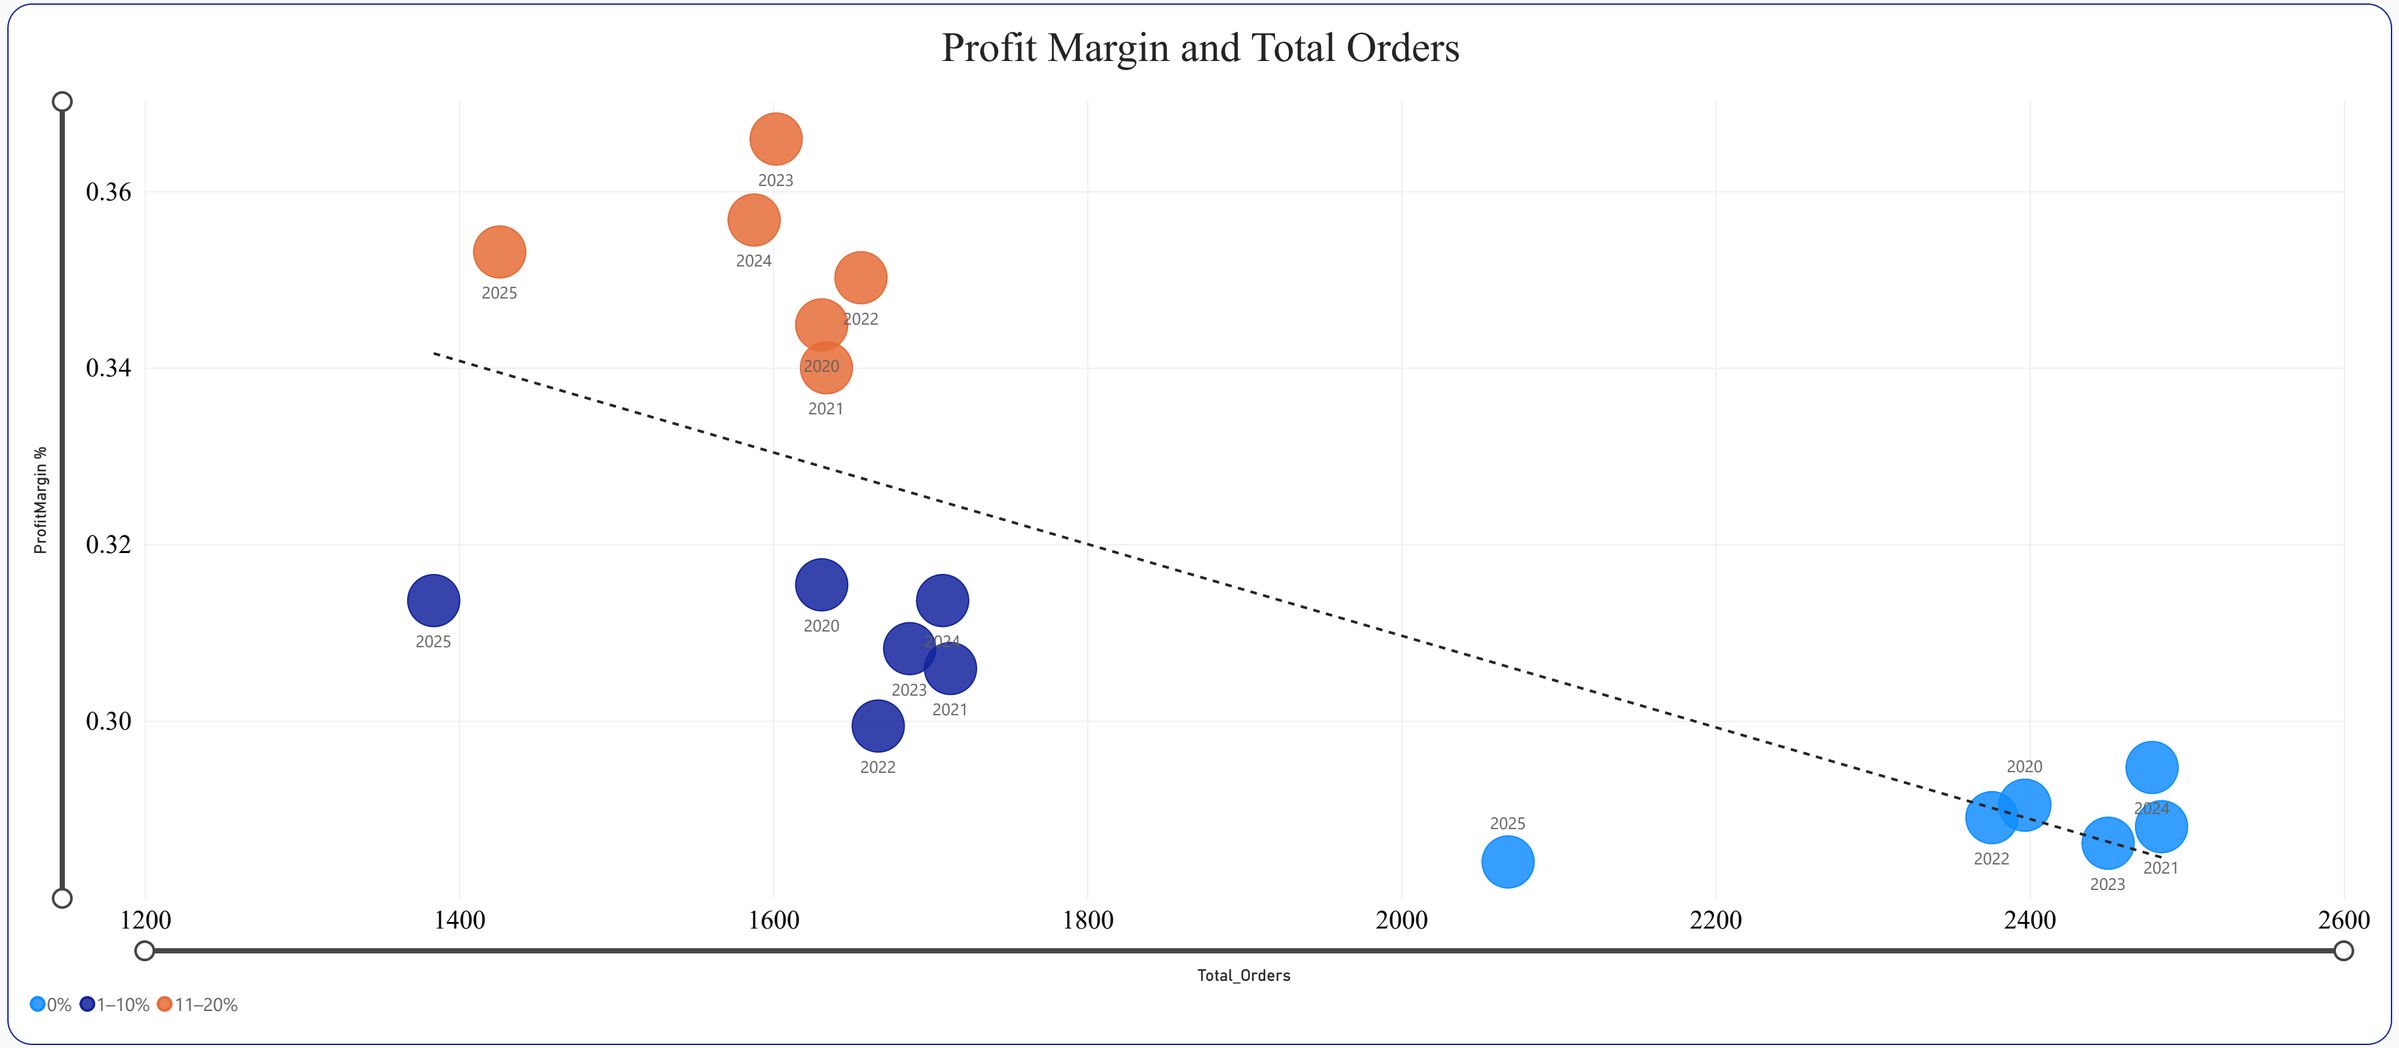

Orders and Average Order Value by Source

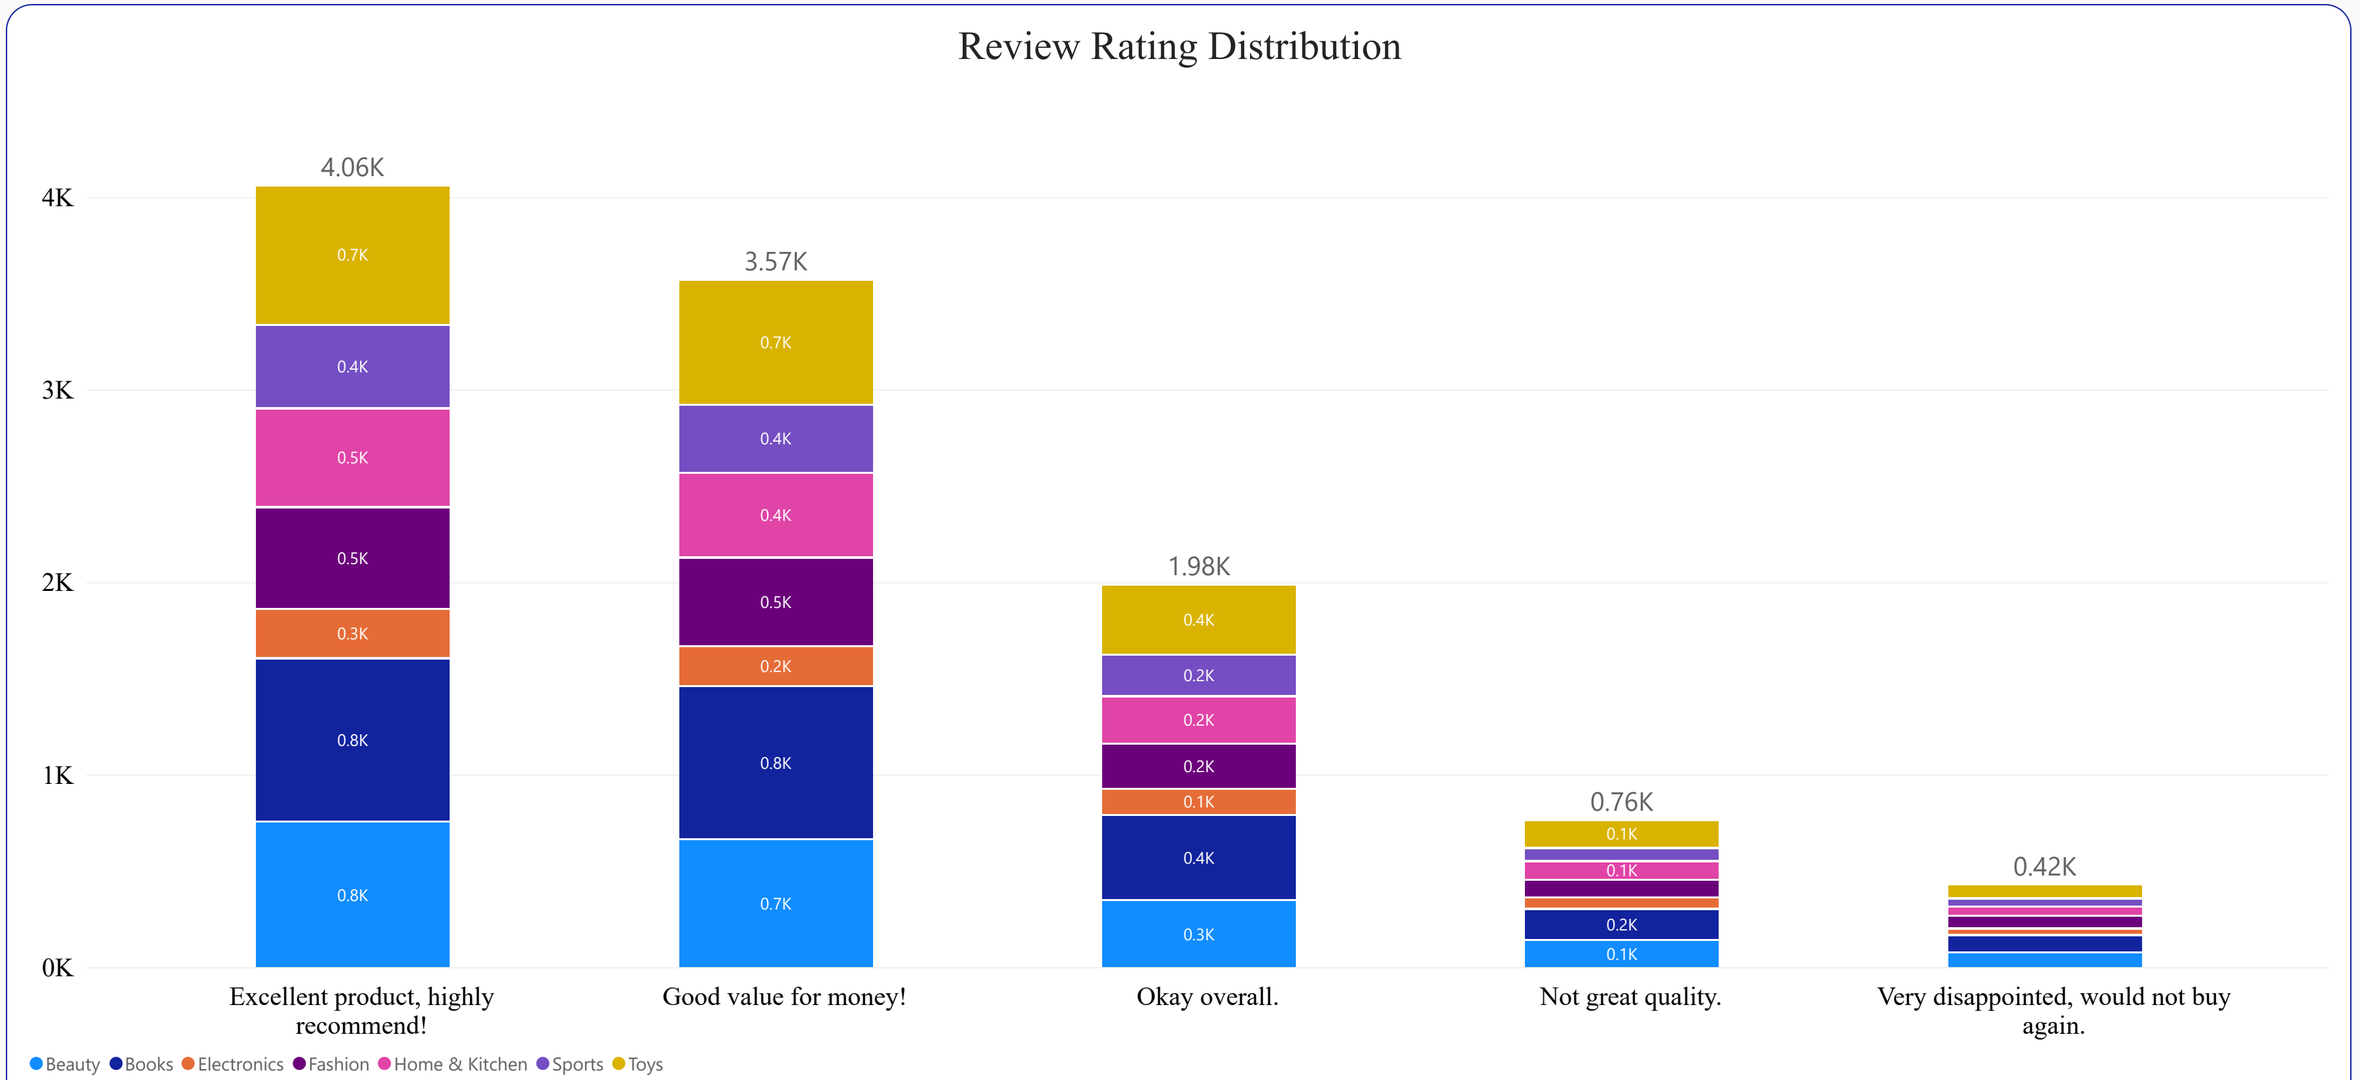

Source ORGANIC generates the most orders: 11268, while source REFERRAL has the highest average order value: 137.19. This distinction helps separate channels that drive order volume from those associated with higher-value purchases.

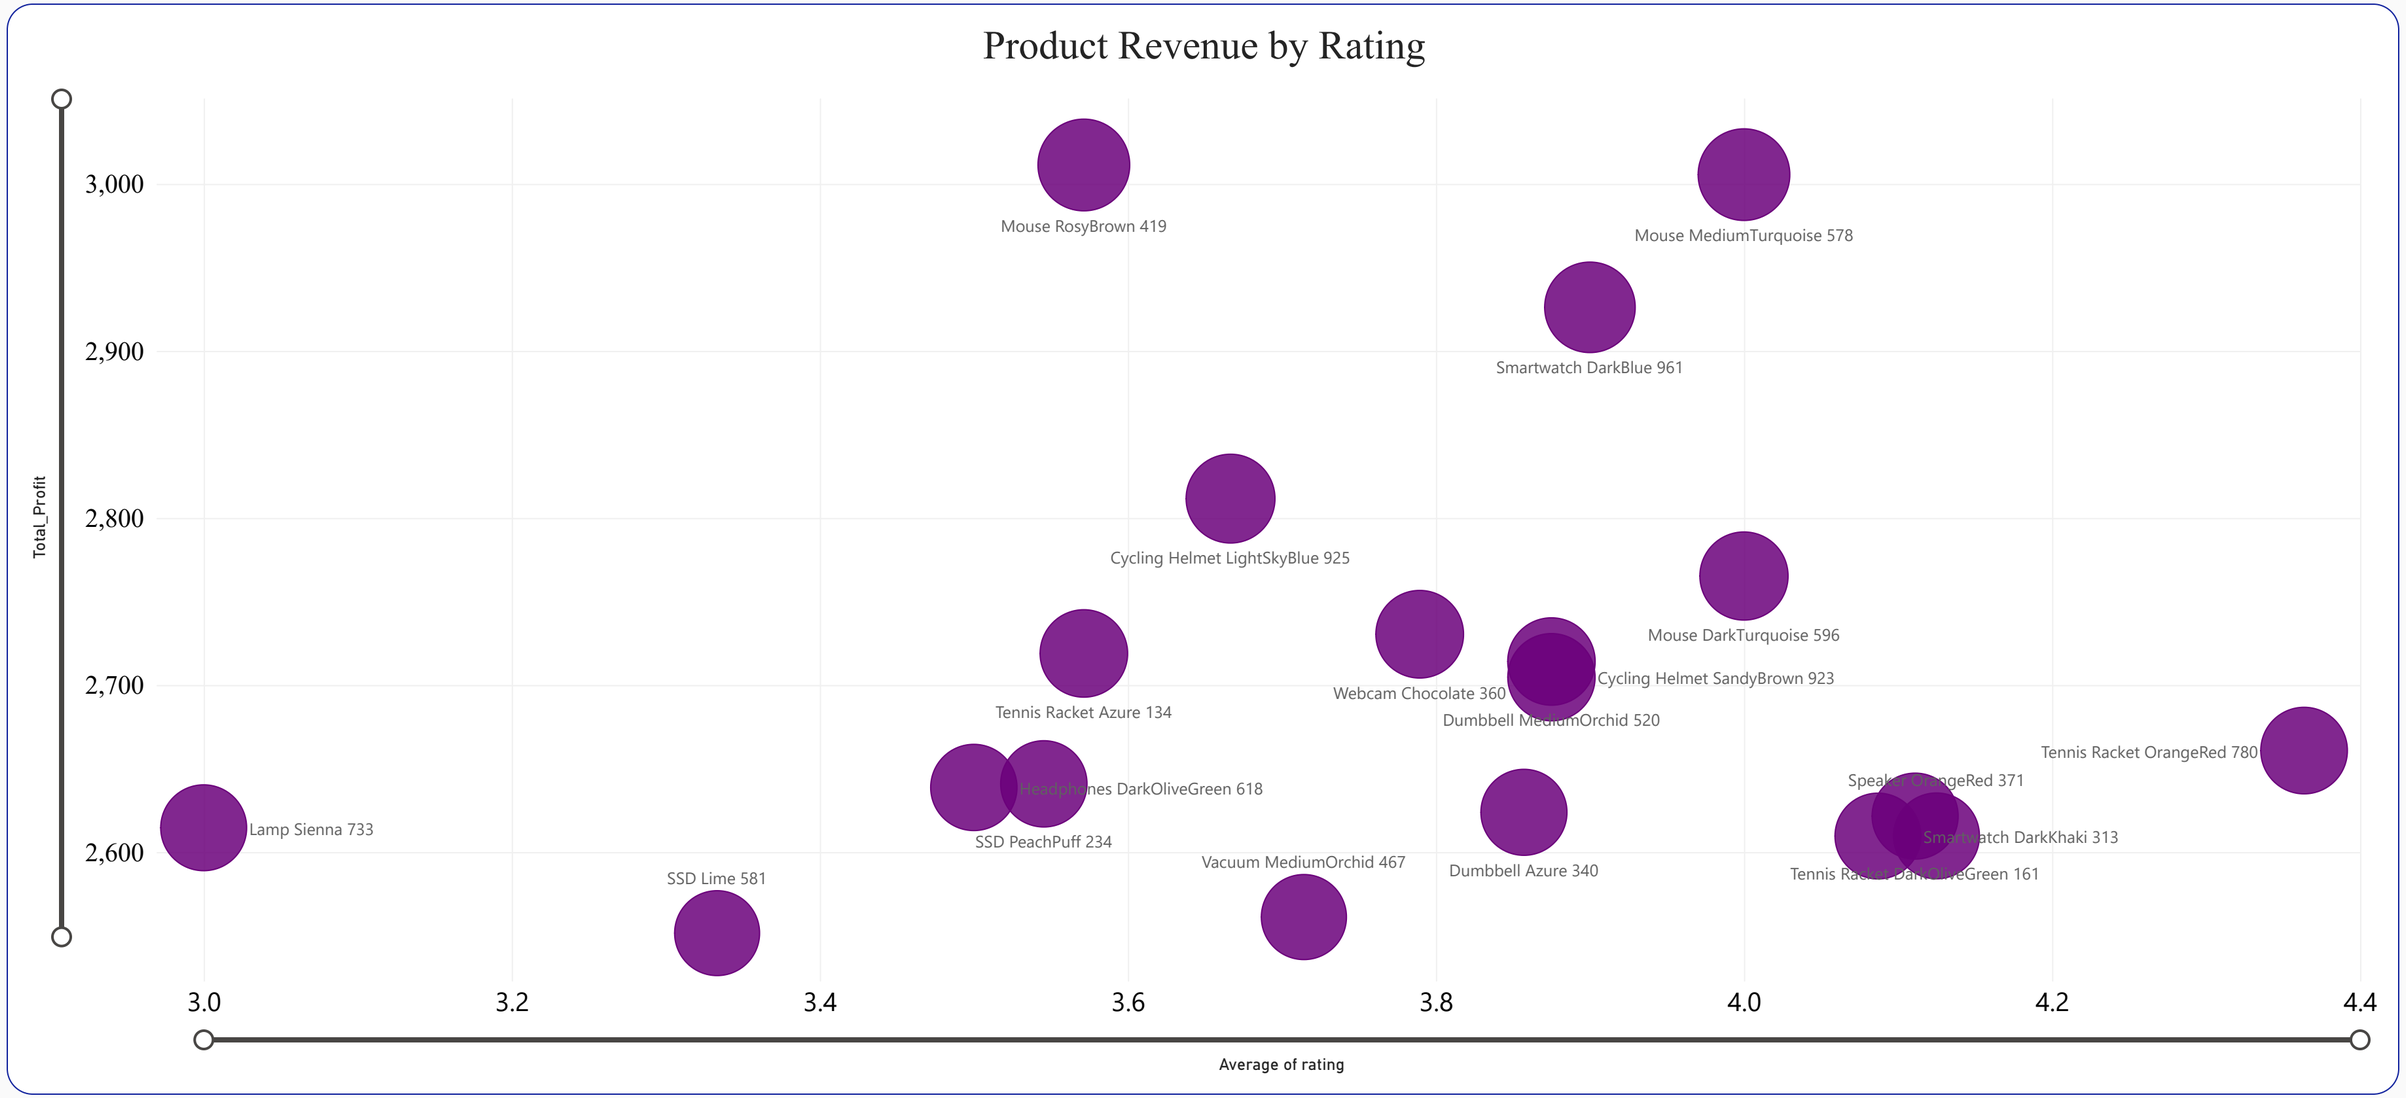

Among the top 15 products, Mouse RosyBrown in the Electronics category generates $3,011 in profit from 55 units sold, compared with Tennis Racket Azure in the Sports category, which generates $2,718 in profit from 38 units. Mouse Rosybrown therefore delivers $293 more profit and 17 additional units sold than the tennis racket. This highlights differences in product profitability and sales volume across the selected products.

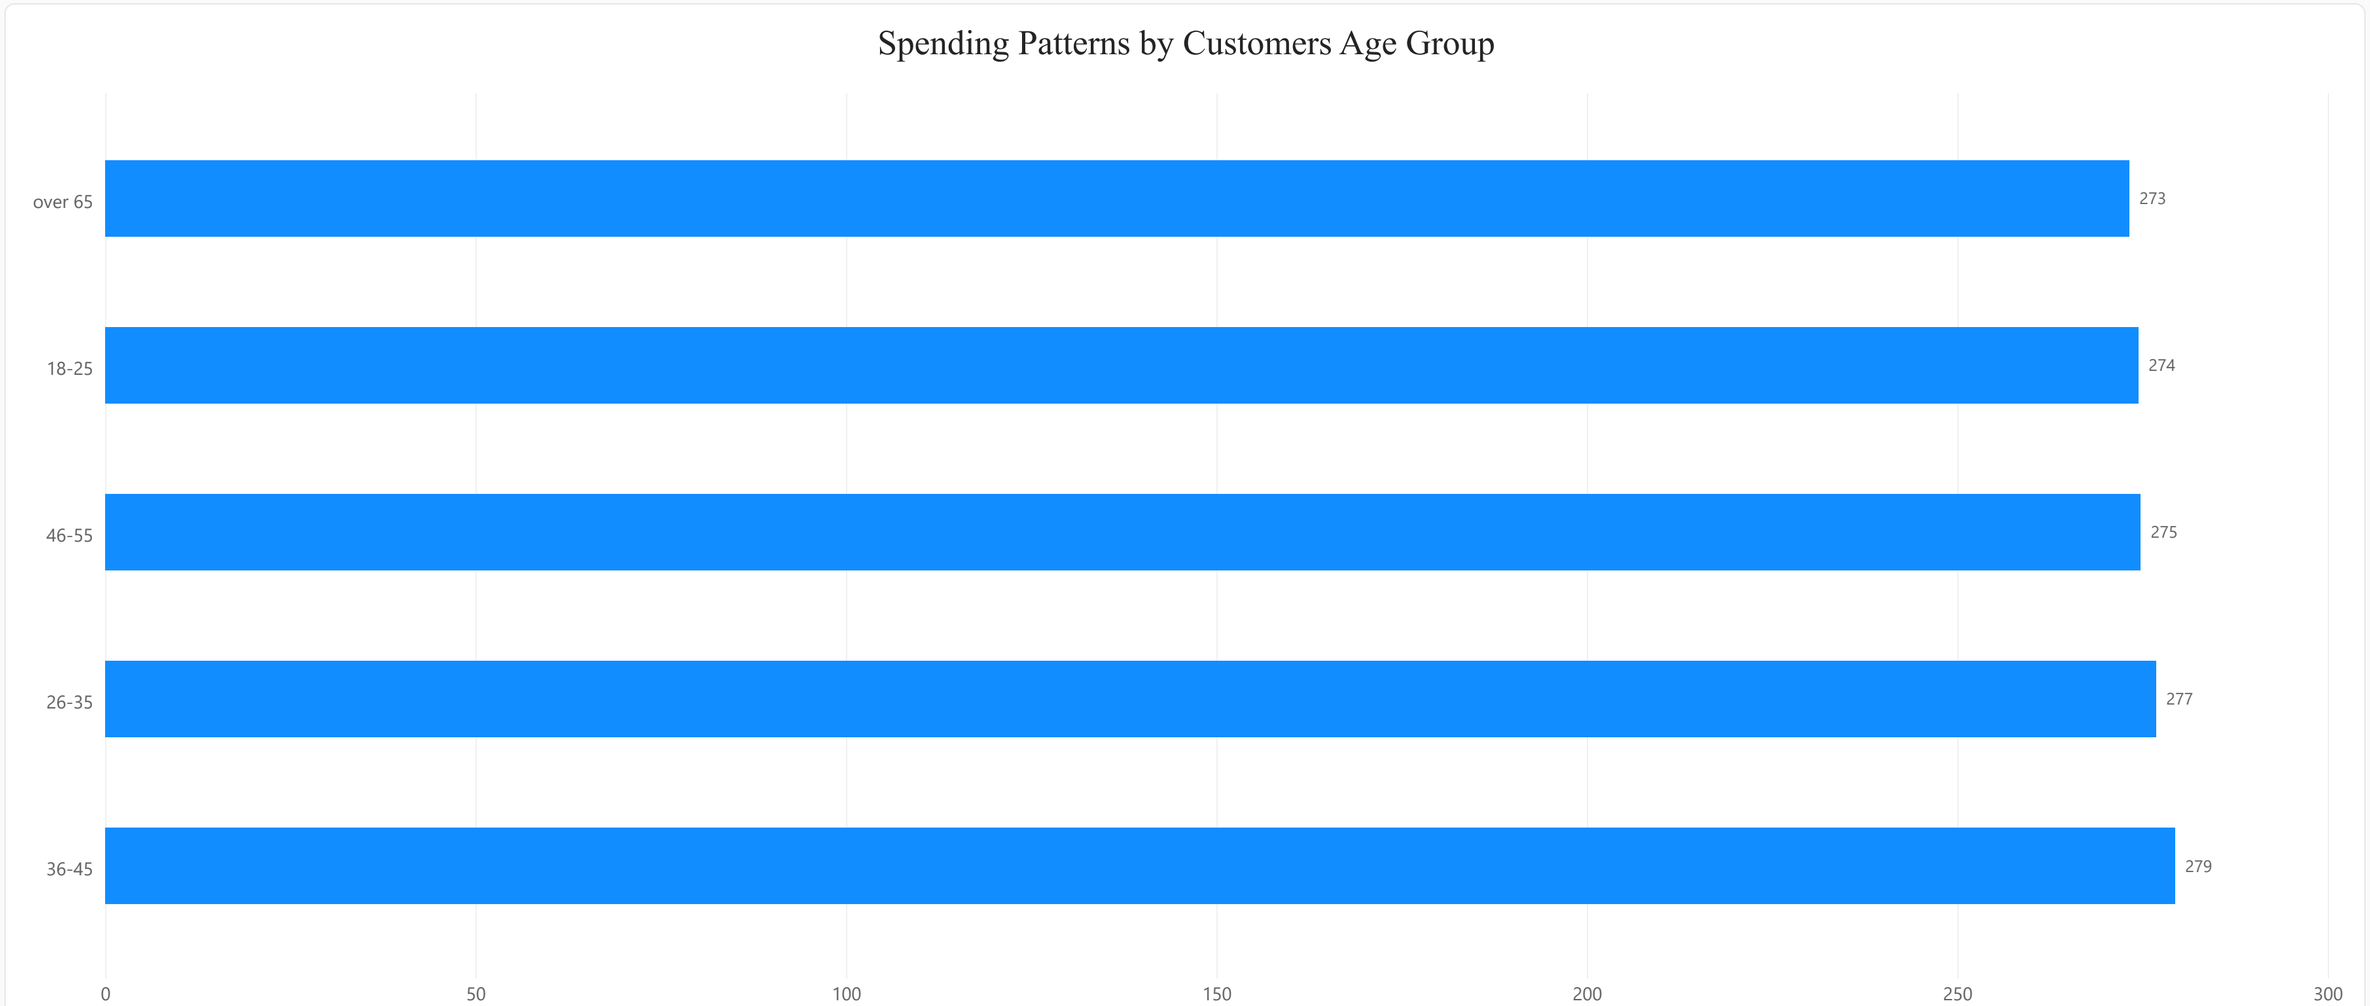

The relationship between order volume and profit margin from 2020 to 2025. The year-by-year view helps identify changes in sales activity and profitability over time, highlighting periods where higher order volumes coincide with stronger or weaker margins.

Excellent ratings dominate the review distribution, reaching 20.3K, while very disappointing ratings account for just 0.4K. This suggests that customer feedback is heavily weighted towards positive experiences, with very negative ratings representing a much smaller share.

The Mouse RosyBrown generates the highest profit at $3,005, despite having a lower rating (4.0) than the tennis racket OrangeRed, rated 4.36 with $2,660 profit. The lamp Sienna, rated 3.0, generates $2,614 profit. These results suggest that higher customer ratings do not necessarily translate into higher profitability.

Average revenue per purchasing customer across age groups compared: total revenue is highest among customers aged 36–45, at approximately $770K, while customers over 65 generate the lowest revenue, at around $750K. However, the difference between these age groups is relatively small, suggesting that total revenue is fairly similar across them.

Average Order Value by Acquisition Source and Device

The cohort retention matrix tracks the percentage of customers who make repeat purchases after their first order. Comparing cohorts across subsequent months helps identify whether customers continue to return over time and highlights potential declines in customer retention. Lower percentages indicate that fewer customers from the original cohort are making purchases in that month.
